The G-protein coupled receptor polynucleotide and polypeptide are useful as pharmaceuticals or in the manufacture of medicaments for the treatment of obesity. They are useful in the diagnosis and treatment of diseases and disorders associated with signal transduction such as obesity, diabetes and metabolic disease, neurological disease, psychotherapeutics, urogenital disease, inflammation, cancer, tissue repair, dermatology, skin pigmentation, photoageing, frailty
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  sl

Screening a human to diagnose a disorder affecting the brain or a genetic predisposition, specifically schizophrenia. nGPCRx are useful for dentifying compounds useful for treating schizophrenia. Detection of nGPCRx in a sample is useful as a diagnostic tool for diseases or clistorders e.g. thyroid disorders, renal failure, rheumatoid arthritis, CNS disorders, infections such as HIV-1, metabolic and cardiovascular clistorders, infections such as HIV-1, metabolic and cardiovascular clistorders, proliferative disorders and hormonal disorders. Modulators of nGPCRx activity have the utility for treating neurological disorders, including schizophrenia, ADHD/ADD (attention deficit-hyperactivity disorder/attention deficit disorder), and neuronal disorders such as Alzheimer's disease, Parkinson's disease, migraine and senile dementia. Additional disorders include inflammatory conditions (e.g. Crohn's crespiratory allments such as asthma, and inflammatory diseases e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches 729;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to novel G protein-coupled receptors (nGPCRx; where x is 1, 3, 4, 5, 9, 11, 12, 14-18, 20, 21, 22, 24, 27, 28, 31-38, 40, 41, 53-60) and their coding sequences. The present sequence is the coding sequence for one such G protein-coupled receptor. GPCRs are also known as seven transmembrane receptors and function in signal transduction. The nGPCRx coding sequences are useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 801 BP; 200 A; 187 C; 261 G; 153 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   B
The invention relates to an isolated polypeptide encoded by a nucleic acid molecule that is at least 80% identical to the G protein-coupled (GPCR) polypucleotides included in the specification. CC Also included are probes based on the GPCR sequences (including comprising an expression vector comprising comprises probes), a host cell comprising an expression vector comprising comprises probes are useful comprising an expression vector comprising comprises and methods of identifying modulators of the polypeptides. The compression as modulators, activators, repressors, agonists or antagonists of inction as modulators, activators, repressors, agonists or antagonists compression as modulators, activators, repressors, agonists or antagonists of the novel GPCR polypeptides including the GALA polypeptide. The compression and nucleic acid probes as described above can be used to diagnose a variety of diseases or disorders in which GPCRs are involved ceg. Alzheimer's disease, amyotrophic lateral sclerosis, asthma, cardiomyopathy, compression, epilepsy, macular degeneration, lymphoma, melanoma, complete sclerosis, osteoarthritts, osteoporosis, parkinson's disease, complete sclerosis, osteoarthritts, schizophrenia, ulcerative colitis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; G protein-coupled receptor; GPCR; ds; GAL4; galanin receptor; Alzheimer's disease; amyotrophic lateral sclerosis; asthma; atherosclerosis; basal cell carcinoma; breast carcinoma; cardiomyopathy; chondrosarcoma; chronic obstructive pulmonary disease; Crohn's disease; depression; epilepsy; macular degeneration; lymphoma; melanoma; multiple sclerosis; osteoarthritis; osteoporosis; Parkinson's disease;

Preferably, compounds that decrease or increase the expression of galanin receptor (GAL4) can be used to treat obesity, diabetes, hyperlipidaemia and stroke. The GPCR nucleic acid is useful for treating the above mentioned disorders by gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             tuberculosis and many other diseases listed in the specification. CC The invention relates to an isolated polypeptide encoded by a nucleic acid molecule that is at least 80% identical to the G protein-coupled (GPCR) polypucleotides included in the specification. CC Also included are probes based on the GPCR sequences (including cantisense probes), a host cell comprising an expression vector comprising the GPCR sequence, antibodies raised against the polypeptides. The C cand methods of identifying modulators of the polypeptides. The C cand methods of identifying modulators of the polypeptides. The C cantibodies and nucleic acid probes as described above can be used to detect the presence of the polypeptides and nucleic acid probes as described above can be used to detect the presence of the polypeptides and nucleic acids and are used to cathorouse a variety of diseases or disorders in which GPCRs are involved ce.g., Alzheimer's disease, amyotrophic lateral sclerosis, asthma, cardiomyopathy, conductors, polippsy, macular degeneration, lymphoma, melanoma, chronic obstructive pulmonary disease, Crohn's disease, or multiple sclerosis, osteoarthritis, osteoporosis, Parkinson's disease, compressis, pain perception disorders listed in the specification. The probes and antibodies are also useful for diagnosing cognition and memory cdisorders, pain perception disorders, obesity, diabetes, Alzheimer's cdisorders, phyperlipidaemia and stroke. The GPCR nucleic acid is useful for treating the above mentioned disorders by gene therapy techniques. The present sequence is a novel GPCR polynucleotide of the invention.

                                                                                                                                                                                                                                                                                                                                             The present sequence encodes a human TGR-1 protein. The specification describes a method of screening a compound, which is capable of binding properties of neuromedin U to TGR-1. The method is useful for screening preventatives and remedies for hypertension, stress diseases, etc.. TGR-1 antagonists are also useful for treating the same diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                       Identifying predicted or actual structures of two chemical or physical library by mass spectrometry correlating molecular mass measurements of two or shared chemical history .

The present sequence is a cDNA encoding hRUP6, an endogenous human corphan G protein-coupled receptor (GPCR). The full length hRUP6 cDNA was cloned by RT-PCR using human thymus cDNA as template.

The orphan GPCR of the invention, like all GPCRs has seven transmembrane alpha helices with an extracellular N-terminus and an intracellular C-terminus. However, no endogenous ligands has yet been identified for the proteins of the invention. The orphan GPCRs may be used in the identification of their endogenous ligands, and to screen potential GPCR agonists and antagonists for use as pharmaceutical agents. The proteins may also be used in the study of GPCR-mediated signalling cascades, and to elucidate their precise role in normal and diseased human conditions. Nucleic acid encoding human orphan GPCRs may be used for tissue localisation expression analysis to provide information about their function in healthy and pathological states.

                                                                                                                                                                                                                                                                                                                       The present invention describes transmembrane receptors, preferably human G protein coupled receptors (GPCR), for which the endogenous ligand is unknown (orphan GPCR receptors). More specifically the present invention relates to non-endogenous, constitutively activated versions of a human GPCR. These non-endogenous human GPCRs can be useful for the direct identification of candidate compounds as receptors agonists, inverse agonists or partial agonists for use as pharmaceutical agents.
